SpeedGuard Flatbed Fall Protection System

Falls from flatbed trailers cause countless injuries and fatalities. Protect your employees with the SpeedGuard flatbed protection system.

Safety is Job 1: At 10 ft (height of a worker standing on a 48" flatbed) up to 720 ft. lbs of energy and 4300 lbs of impact force are generated. This is more than enough to cause severe injury or fatality. Climbing on and off the flatbed also puts your employees at risk. The SpeedGuard eliminates both these hazards from the workplace.

SpeedGuard Stairway: Wheeled Design easily rolls into position. Integrated stabilizer jacks keep stairway in position during use. Integrated storage for all components streamlines setup and teardown.

Flexibility: The SpeedGuard system is designed to fit in standard pockets and includes all components needed to protect trailers up to 48 ft long. (order extension kit to protect trailers up to 53 ft.) With installation in less than 10 minutes, SpeedGuard makes safety easy. For damaged or older flatbeds, choose the clamp on the system for universal fit.
