Pick-Up Truck Racks

Our Contractor Rig™ is the undisputed leader among contractor ladder racks. Its heavy-wall, large-profile, rust-free aluminum extrusions provide a 1250 lb. capacity in the Heavy Work I.T.S.® series Contractor Rig and a 1000 lb. capacity in the Standard Contractor Rig. In addition to delivering outstanding performance and longevity in high-abuse environments, its ability to be configured to your own particular needs means better versatility, better organization, and ultimately better efficiency for you and your company. The Contractor Rig includes a removable rear crossmember, with adjustable handles, Ladder Life™ anti-wear inserts on each crossmember, Ladder Glide® low friction insert on rear crossmember, and color inserts to match the truck.

Our Utility Rig™ is a highly versatile and economical rack and is available in both Standard and I.T.S.® series. Its extremely rigid free-standing trusses have a 600 lb. capacity and allow easy loading and unloading of equipment and material. Furthermore, the rear Truss is completely removable in seconds for full, unrestricted access to the cargo area. The Utility Rig™ includes Ladder Life™ anti-wear inserts for ladder protection, Ladder Glide® low friction insert for easy loading and unloading, side stops on all four upper corners, and color inserts to match the truck.

Pick-Up Truck Racks

Tool Boxes of any style mount directly to System One® equipment and require no drilling into the truck bed rail, truck bed, or bed liner. Top-side and low-side boxes mount in minutes with System One's Tool Box Hangers, eliminating the need to install support legs underneath. This leaves a large, clear, unobstructed cargo area and makes loading of 4ft. wide material easy. Trucks with 8ft. beds allow tool boxes up to 88" to be installed; 90" tool boxes are accommodated with optional extra-length Pick-Up Traks®.

System One's Cantilever Mounts allow the Contractor Rig® to be installed over truck caps. Our in stock sizes fit most caps; others can be cut to order. The stainless steel mounts are fastened to the structural Pick-Up Trak®, instead of to the thin sheet metal of the bed rail. This mounting method distributes the weight evenly on the bed rail resulting in an extremely rigid installation.

Our **Utility Rig®** is particularly suited for trucks with a sport/utility function. It retains the important features needed by contractors, yet it can be broken down in seconds and the trusses can be placed in the bed of the truck or hung on a garage wall. The Pick-Up Traks® remain on the truck and serve as a cargo restraint system and bed rail protector.

Utility Body Racks

System One's Contractor Rig® and Utility Rig® can be mounted to utility bodies. Our Utility Trak provides a rigid mounting surface for either style rack. One, two or three trusses can be mounted and dismantled with ease anywhere along the length of the Trak. The Utility Trak attaches to the top surface of the utility body using concealed bolts and also serves as a structural anchor rail for tie-downs. Racks are available for 8 , 9 and 11 ft. bodies. The Extension Beams for Contractor Rigs are supplied in lengths of 102", 120", 138", 147", 156" and 174" depending on the body and cab length. The difference in height between the body and cab roof must be provided as racks are available in different heights.

Utility Body Trucks with top-opening lids can be outfitted utilizing either our standard or narrow profile Pick-up Trak. These Traks are the same as those used on pick-up trucks and mount to the top inside corner of the body. A T-slot on the top surface of the trak is used to mount the rack and another T-slot on the inside surface is used for cargo anchors and other accessories. Vertical uprights are provided which allow the use of full width crossmembers. The difference in height between body and cab roof must be provided. Available configurations include Contractor Rig and Utility Rig, Standard and Heavy I.T.S. Series.
