

**THANK YOU FOR
YOUR PURCHASE!**

Thank you for purchasing a VariSafe Ladder Lock Out! Your new device will prevent unauthorized use of fixed ladders in a variety of environments, making your facility or jobsite safer for everyone. Please follow the instructions below to properly install your Ladder Lock Out. If you have questions or need help, please contact us with the information listed at the end of this sheet.

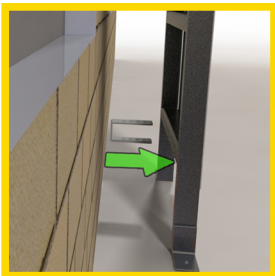

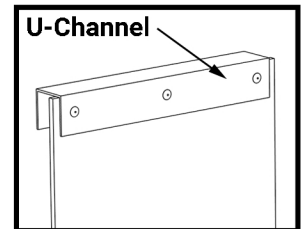

STEP ONE

Confirm that the width of your ladder rungs are 16" or greater. Once confirmed, take your Ladder Lock Out to the fixed ladder for installation.

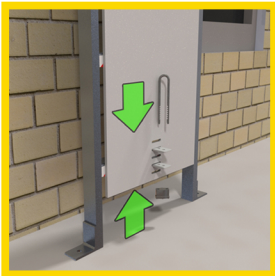

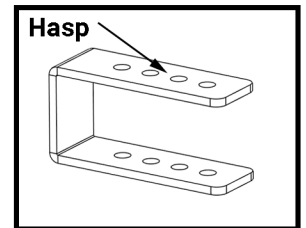

STEP TWO

Place the upper U-Channel of the Ladder Lock Out over the 6th or 7th rung and release, allowing the Ladder Lock Out to "hang" in place on the U-Channel.

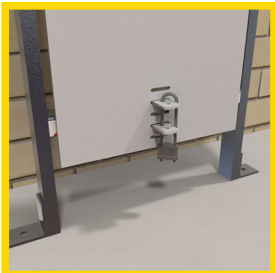

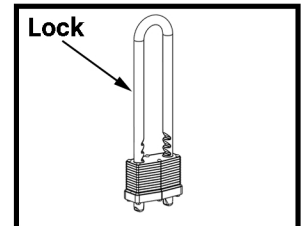

STEP THREE

Take the "Hasp" to the back of the ladder, and place it around the rung, pushing it toward the Ladder Lock Out, and feeding it through the slots.

STEP FOUR

After pushing the "Hasp" through as far as possible, use the included lock to secure the "Hasp" in place. Take care to use the holes closest to the body of the Ladder Lock Out for the most secure fit.

STEP FIVE

Check to make sure lock has engaged. Your Ladder Lock Out is now installed!
