

Outdoor Flammable Safety Cabinets

Product Images

Short Description

- Fully spot welded Galvanneal 18 Gauge Steel double wall construction has 16 times more corrosion resistance than regular steel
- Slanted top with rain gutter guides rain or snow away from the cabinet opening
- Continuous stainless steel piano hinges ensure doors close smoothly and reliably
- Stainless steel paddle handle lock with three-point latching system keeps contents secure
- 12 Gauge skid allows easy relocation with forklifts
- Extra hem on door for seal protection prevents rainwater from getting inside the cabinet
- Stable trapezoid legs ensure stability on outdoor terrain
- FM Approved

Description

In the complex landscape of industrial safety, proper storage of hazardous and flammable liquids is crucial, both indoors and outdoors. Justrite Outdoor Flammable Storage Cabinets are specifically designed to mitigate risks associated with improper handling and storage of these materials outside. These cabinets are engineered to provide safe and compliant storage solutions for a variety of hazardous materials.

Constructed with fully welded Galvanneal 18 Gauge Steel, these cabinets feature a double wall with a 1.5" air space gap, providing high resistance to corrosion and ensuring durability in outdoor conditions. The slanted roof design diverts rain and snow away from the cabinet doors, protecting the contents from moisture. High-grade stainless steel hinges and a stainless steel paddle handle lock with a robust three-point latching system secure against unauthorized access. The cabinet is supported by 12 Gauge skids and stable trapezoid legs for ease of placement and mobility. The bright yellow color of these cabinets clearly identifies them as flammable storage units, enhancing visibility and safety in outdoor environments.

To manage accidental spills, the cabinets include spill-proof slope shelves accompanied by a fully welded sump. A ground screw is integrated for proper grounding, while the UV-resistant chemical-resistant powder-coated paint finish endures through harsh conditions without compromising the cabinet's integrity. The cabinets also feature vents equipped with flash arrestors, welded shelf hangers, and a leak-proof sump, ensuring compliance with OSHA and NFPA requirements. All outdoor flammable cabinets have FM approval.

Justrite Outdoor Flammable Storage Cabinets are available in various configurations to meet your specific needs. By selecting the appropriate door type and capacity, you can customize your cabinet to ensure compliance and safety in your outdoor storage environment. Choose from manual closing or self-closing doors, and capacities of 30, 45, 60 and 90 gallons, to find the perfect solution for your outdoor flammable storage requirements.

Self-closing doors are a valuable feature in safety cabinets, offering enhanced safety and compliance. These doors automatically close and latch in the event of a fire or emergency, providing a critical barrier against the spread of fire and reducing the risk of ignition outside the cabinet. Self-closing doors minimize human error by ensuring that the cabinet is always properly closed, even when staff are distracted or forgetful. This feature is particularly important for storing flammable liquids, as it helps contain vapors and prevent accidental releases, thereby improving overall workplace safety. The self-closing mechanism uses fusible links that melt at 165°F (74°C), causing the doors to shut automatically under fire conditions.

Investing in Justrite outdoor flammable storage cabinets not only enhances safety but also protects your business from potential financial disasters associated with fires and environmental contamination. By configuring your cabinet to meet your specific needs, you ensure a safe and compliant storage solution that safeguards both your business and the environment.
